Let f be a real-valued function with n+1 derivatives at each point of \mathbb{R} . Show that for each pair of real numbers a, b, a < b, such that

$$\ln\left(\frac{f(b) + f'(b) + \dots + f(n)(b)}{f(a) + f'(a) + \dots + f(n)(a)}\right) = b - a$$

there is a number c in the open interval (a, b) for which

$$f^{(n+1)}(c) = f(c).$$

Note that ln denotes the natural logarithm.
